

Fund Objective

The objective of the portfolio is to provide investors with a moderate to high long-term total return.

Fund Strategy

The portfolio will invest in a combination of assets in liquid form, money market instruments, bonds, debentures, corporate debt, equity securities, property securities, preference shares, convertible equities, derivatives, non-equity securities and any other securities which are considered to be consistent with the portfolio's primary objective and the Act. The manager may also include unlisted forward currency, interest rate and exchange rate swap transactions for efficient portfolio management purposes. The portfolio will be actively managed with exposure to various asset classes being varied to reflect changing economic and market circumstances, in order to maximize returns for investors. The portfolio shall limit equity exposure to 75%. The portfolio will be managed in accordance with regulations governing pension funds.

Maximum Annual Advice Fee	1.15
Manager Annual Fee	1.26
Total Expense Ratio	1.78
Transaction Cost	0.27
Total Investment Charges	2.05
Performance Fee	0.34
TER Measurement Period	01 January 2018 - 31 December 2020

The manager decreased the annual management fee on 1 October 2017 to 1.25% from 1.53%.

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Manager Performance Fee - Performance fee benchmark: ASISA Category Average: South African - Multi Asset - High Equity; Minimum Fee 1.25%; Maximum Fee 2.42%. All fees are inclusive of VAT. Performance fees are calculated as 20% of the outperformance of the benchmark over a rolling 12 month period.

*Highest and Lowest annual returns are updated annually at year end.

**Performance in MDD is measured since the Fee Class Launch Date.

Risk Profile

Moderate Aggressive

In this portfolio, capital growth is of primary importance and results in a higher allocation to equities. The portfolio may display capital fluctuations over the shorter-term, however, volatility levels should be lower than a pure equity fund. While diversified across all the major asset classes, this portfolio is tilted more towards equities and other risky asset classes to ensure the best long-term returns of all the asset classes. Fixed income positions are minimized.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer-term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

Market Capitalization

Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Performance Fee

Performance fees are incentive fees earned by the manager for performance in excess of the benchmark.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Portfolio Manager Comment

As at 31 March 2021

Performance review

After a number of years of peer beating returns, the Northstar SCI Managed Fund had a slower quarter, slightly underperforming its peer group. That said, it had a very good March.

The asset allocation decisions in the fund were on balance sound for the quarter, being overweight SA equities relative to peers and well exposed to global equities - both performed well. Less successful was the fixed income call, having carried a higher exposure relative to peers, this detracted from performance with the All Bond Index (ALBI) negative year-to-date, albeit that our fixed income component has been flat from 1 January. Our bond valuation work indicates that fixed bonds are extremely attractive at current levels and we believe are likely to outperform cash even if we incorporate our bear-case scenario for this asset class.

Global equity markets performed well during the first quarter of 2021 with the MSCI World Index returning 5.1% in dollars but 2.2% in rand terms, it is up 18% from pre-Covid levels reached in February 2020. Markets benefitted from both the improved momentum in vaccine rollouts as well as the US Democrat election victory which paved the way for a USD 2.2 trillion fiscal stimulus package.

Improved global growth expectations and a higher medium term inflation outlook has resulted in developed market bond yields rising and cyclically sensitive equities driving equity markets higher. It is this cyclicality and rotation to value stocks that held-back the fund's quarterly performance - the fund has a definitive quality bias.

For the quarter under review our offshore equity stock selection delivered healthy positive attribution, but due to cyclical sectors such as energy and industrials rallying and the fund's no or low exposure to these, sector allocation effects were negative - the net result of positive stock selection offset by negative sector exposure was that the offshore portion of the fund returned 4.9% in dollars for the quarter, versus 5.1% for the MSCI World Index.

Global growth optimism also benefitted commodity prices with oil prices up 22% and copper 13% year to date (YTD). Particularly relevant to South Africa miners, Platinum Group Metals (PGM) prices continued to perform ahead of expectation driven by strong platinum and palladium prices and a 55% rally in the Rhodium price during the quarter.

This all ensured that South African equities performed well with the JSE Capped SWIX returning 3.7% in March and 12.6% YTD. The local market does however have a polarized return structure, SA resources have outperformed local industrials and financials - 18.7% over the quarter for resources versus 13.0% for industrials and only 3.8% for financials. Locally listed dual listed stocks are benefiting from an improving global macro-economic backdrop, while SA sensitive stocks are plagued by specifically domestic issues such as the poor rate of vaccine rollout and overall weak business confidence. It should be noted that many SA sensitive companies are cheap, albeit out of favour.

On the local front, the fund benefitted from exposure to high conviction calls such as MTN, Shoprite, Sasol and Mr. Price, whereas being underweight diversified miners and PGM producers detracted from performance. Overall, our local stocks delivered a return of 10.1% versus the 12.6% of the Capped SWIX for the three months under review.

Positioning and expectations

We believe that the fund, from an asset allocation perspective is well positioned to achieve its targeted return objective. Our valuation work indicates that local stocks which we own in the fund have double digit expected returns, offshore stocks high single digit potential US dollar returns and the fixed income component should meaningfully outperform inflation. The margin of safety embedded in the securities owned is extremely high, which normally precipitates sound prospective returns.

In conclusion, activity in the fund is presently more elevated than normal due to the extent of price movement seen in certain stocks over the past 12 months. In situations where stocks held have re-priced beyond our expectations, we have reduced exposures, recycling capital to an endless array of opportunities where market prices do not adequately account for intrinsic value.

Additional Information

The Northstar Sanlam Collective Investments Managed Fund performance measurement start date is 1 November 2011. All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generallyly medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Northstar Asset Management (Pty) Ltd, (FSP) Licence No. 601, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the conamed portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.
