

NORTHSTAR GLOBAL FLEXIBLE FUND

A sub-fund of the Sanlam Global Funds plc

NORTHSTAR

MDD Issue Date: 2024/04/25

FUND OBJECTIVE

The objective of the portfolio is to deliver long-term capital growth by investing in various assets classes, predominantly in equity.

FUND STRATEGY

The fund will be managed with a bias towards global equities due to the superior long-term returns from this asset class. If prospective returns from equities are unattractive, exposure to other asset classes, such as real estate, bonds and cash will increase.

FUND INFORMATION

Manager	Sanlam Asset Management (Ireland) Ltd
Investment Manager	Northstar Asset Management (Pty) Ltd
Portfolio Manager	Adrian Clayton & Mark Seymour
Depository / Custodian	Brown Brother Harriman Trustees Services (Ireland) Ltd

ASSET ALLOCATION

(at 31/03/2024)

**ANNUALISED PERFORMANCE (%)**

(at 31/03/2024)

*Strategy: Northstar Asset Management are the portfolio manager of the Northstar SCI Global Flexible Fund ("NSSGF"); a SA CIS, which is approved by the SA regulator (FSCA), which follows an identical investment strategy to that of this Fund. The NSSGF's inception date was 12 January 2016. To produce the Strategy data below; the performance of the NSSGF is used between 12 January 2016 and 31 May 2017, and the Northstar Global Flexible Fund performance is used from 01 June 2017 to present. This provides investors and potential investors with a longer-term track record of the Portfolio Manager's performance; this forms the Strategy

Strategy Inception: 12 January 2016	*Strategy	Benchmark
3 Year	2.84	1.37
Since Inception	8.65	4.11

Past performance is not necessarily a guide to future performance

RISK PROFILE

Medium to high risk

While the manager may diversify across all asset classes, the fund is expected to be meaningfully invested in equities over time. This fund is deemed to be medium to high risk in relation to other asset classes due to its exposure to shares and stocks. The price of shares and the income from them may fall as well as rise and investors may not get back the amount they have invested.

Irish domestic law implementing EU and United Nations sanctions may limit or prohibit investment in certain markets and this may have an adverse impact on the operations of the Fund. Investing in international companies means that currency exchange rate fluctuations will have an impact on the Fund returns. Foreign currency shortages in some markets could reduce the fund's ability to repatriate funds. The investment manager aims to reduce the overall risk by their value and fundamental stance. Other risks are Settlement and Clearing Risk, Political Custody Risk, Legal Risk, Efficient Portfolio Management Risk, Reinvestment of Cash Collateral Risk and Securities Lending Risk. Further information regarding risk can be obtained by reference to the Prospectus and Supplement.

GLOSSARY TERMS

Annualised total returns

Annualised return is the weighted average compound growth rate over the period measured.

Capital growth

Capital growth is the profit made on an investment, measured by the increase in its market value over the invested amount or cost price. It is also called capital appreciation.

Equities

Equities are shares that represent an institution's or individual's ownership in a listed company. These shares are also the "vehicle" through which they are able to "share" in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase which translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling.

Shares / equities are usually considered to have the potential for the highest return of all the investment classes but also have the highest level of risk i.e., share investments have the most volatile returns over the short term. An investment in equities should be viewed with a 7 to 10-year horizon.

Undervalued equity stocks (Value investing approach)

This is a strategy of selecting shares that trade for less than their intrinsic values. Value investors actively seek stocks that they believe the market has undervalued. They believe the market overreacts to good and bad news, resulting in stock price movements that do not correspond with the company's actual long-term fundamentals. The result is an opportunity for value investors to profit by buying when the price is deflated.

Securities

A general term for shares, bonds, money market instruments and debentures.

Collective investment scheme (CIS)

Collective investment schemes (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

Total Expense Ratio (TER)

This is the total costs associated with managing and operating an investment (administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Standard deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the amount of expected volatility in an investment.

Disclaimer

Northstar is an authorised financial services provider (license number 601). The Northstar Global Flexible Fund launch date is 1 June 2017. Further details of the fund are available at www.sanlam.ie The graphs and detail are intended to provide the user with an indication as to how the fund will function, nothing is guaranteed. PORTFOLIO MANAGER COMMENT

As at 31 March 2024

Market and Portfolio Review:

The Northstar Global Flexible \$ fund had another solid performance over the quarter under review. It returned 5.82% versus the average of peers at 3.8%. Over the past year, the fund has gained 13.09% in dollars and the average peer 10.51%. Since its inception, it has returned 6.81% annualized versus 3.3% for its sector and it is ranked in the seventh percentile. Most pleasing is the funds' consistency, it has remained in the top third of its peer group over every significant period since its inception. The peer group is the EAA USD Flexible Allocation sector.

Despite this pleasing performance against flexible peers, our investment team has not found the markets easy to navigate. In fact, the equity component of the fund underperformed the MSCI World index over 12 months (MSCI World 25.6% versus equities in the fund 20.15%). Fortunately, for the past quarter, our equity returns are like the equity benchmark, at 8.29% versus the MSCI World at 8.97% and in March, the fund's stocks outperformed the MSCI World index.

But rampant Tech (+12.4%) and Energy (+10%), both of which we have underweight to no exposure, as well as Communication services (+13%), where we are only slightly overweight, made beating the index difficult. In addition, our large overweight sector bests, in Healthcare (13.5% positive active bet) and Staples (7.6% positive active bet) underperformed the market for the quarter under review.

We contextualize the difficulty in beating the market in 2023 and early 2024 as follows. This is not the first time our equity portfolio has struggled against the index, the same happened in 2021 and for the same reason – momentum is the single largest factor driving the index – the momentum factor returned 20.1% in Q1 2024 and 36% over 12 months against Quality at 11.6% in 2024 and 33.6% over 12 months. Value as a factor has gained 7.5% this year and returned 18.8% over 12 months. The Northstar philosophy is to own quality stocks at a reasonable price, the process folds quality and valuation into a compelling case of long-term outperformance. We will struggle in a raging momentum environment!

That said, our benchmark is 60% MSCI World and 40% GLAG. Over the quarter, we outperformed this passive comparison by almost 1%, but we acknowledge that over 12 months, we are lagging the benchmark, simply due to the equity component. Our fixed income team delivered attribution of 3.6% over the past year – good selection accounted for 0.4% of this, the rest came from being underweight fixed income (average weighting of 18.7% in the fund against the benchmark of 40%). For the quarter, bond exposure had been cut to 14% and attribution was 2.2% of which 0.5% came from selection. A 9.4% exposure to gold over the year also helped performance.

Portfolio Positioning:

We have become increasingly defensively positioned in the fund. This is not a gut feel approach, but instead rather mechanically derived. We use our buy list's discount to intrinsic value as a driver of equity exposure, when the buy list operates at a large discount (we increase equity exposure as our stocks are cheap), conversely, when the discount narrows, it implies that stocks are expensive, and we reduce risk asset exposure. The discount narrowed to the lower end of its historical range late last year and particularly in 2024, on this basis, equity exposure has been reduced.

Whilst our process is bottom-up and focused on that level, we do think that various macro indicators are worth noting. These, coincidentally corroborate our defensive positioning and include: Heightened geopolitical uncertainty both in the Middle East and in various countries facing national elections in 2024 – including the USA; High levels of confidence from market participants that a recession is a low probability outcome in the USA, despite such consensus being a contra cyclical indicator and the yield curve remaining inverted and finally; sticky inflation where base effects and energy prices are acting against softer readings.

We believe that the fund is extremely well positioned considering the present investment environment, its risk asset exposure is undervalued relative to the broader index and should outperform over time and its defensive positioning allows the management team to capitalize on any market correction, should this take place.

Regulatory statement

The Fund is a sub-fund of the Sanlam Global Funds plc, an open-ended Umbrella type Investment Company, with segregated liability between its sub-funds, authorised by the Central Bank of Ireland, as a Retail Investors Alternative Investment Fund, a category of non-UCITS collective investment scheme to which the Companies Act 2014 and Chapter 1 of the AIF Rule Book applies. The Fund is managed by Sanlam Asset Management (Ireland) Limited, Beech House, Beech Hill Road, Dublin 4, Ireland, Tel + 353 1 205 3510, Fax + 353 1 205 3521 which is authorised by the Central Bank of Ireland, as a UCITS Management Company, and an Alternative Investment Fund Manager, and is licensed as a Financial Service Provider in terms of Section 8 of the South African FAIS Act of 2002.

The Sanlam Global Funds Plc full prospectus, the Fund supplement, and the MDD is available free of charge from the Manager or at www.sanlam.ie. This is neither an offer to sell, nor a solicitation to buy any securities in any fund managed by us. Any offering is made only pursuant to the relevant offering document, together with the current financial statements of the relevant fund, and the relevant subscription/application forms, all of which must be read in their entirety together with the Sanlam Global Funds plc prospectus, the Fund supplement and the MDD. No offer to purchase securities will be made or accepted prior to receipt by the offeree of these documents, and the completion of all appropriate documentation. A schedule of fees and charges and maximum commissions is available on request from the Manager.

This is a Section 65 approved fund under the Collective Investment Schemes Control Act 45, 2002 (CISCA). Sanlam Collective Investments (RF) (Pty) Ltd is the South African Representative Office for this fund.

The information to follow does not constitute financial advice, solicitation, invitation or investment recommendation as contemplated in terms of the South African Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment, decision, not all investments are suitable for all investors. Collective investment schemes are generally medium to long term investments.

Please note that past performance is not necessarily a guide to future performance, and that the value of investments / units / unit trusts may go down as well as up. The validity and accuracy of any illustrations, forecasts or hypothetical data are not guaranteed and are only provided for illustrative purposes. Changes in exchange rates may have an adverse effect on the value, price or income of the product. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending.

Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ based on the initial fees applicable, the actual investment date, the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Trail commission and incentives may be paid and are for the account of the Manager. The Manager has the right to close any Portfolios to new investors to manage them more efficiently in accordance with their mandates. The Manager retains full legal responsibility for this fund. Performance figures for periods longer than 12 months are annualized.

PERFORMANCE REVIEW

The Northstar Global Flexible \$ fund had another solid performance over the quarter under review.

It returned 5.82% versus the average of peers at 3.8%. Over the past year, the fund has gained 13.09% in dollars and the average peer 10.51%. Since its inception, it has returned 6.81% annualized versus 3.3% for its sector and it is ranked in the seventh percentile. Most pleasing is the funds' consistency, it has remained in the top third of its peer group over every significant period since its inception. The peer group is the EAA USD Flexible Allocation sector.

MARKET OUTLOOK AND PORTFOLIO POSITIONING

Despite this pleasing performance against flexible peers, our investment team has not found the markets easy to navigate. In fact, the equity component of the fund underperformed the MSCI World index over 12 months (MSCI World 25.6% versus equities in the fund 20.15%). Fortunately, for the past quarter, our equity returns are like the equity benchmark, at 8.29% versus the MSCI World at 8.97% and in March, the fund's stocks outperformed the MSCI World index.

But rampant Tech (+12.4%) and Energy (+10%), both of which we have underweight to no exposure, as well as Communication services (+13%), where we are only slightly overweight, made beating the index difficult. In addition, our large overweight sector bests, in Healthcare (13.5% positive active bet) and Staples (7.6% positive active bet) underperformed the market for the quarter under review.

We contextualize the difficulty in beating the market in 2023 and early 2024 as follows. This is not the first time our equity portfolio has struggled against the index, the same happened in 2021 and for the same reason – momentum is the single largest factor driving the index – the momentum factor returned 20.1% in Q1 2024 and 36% over 12 months against Quality at 11.6% in 2024 and 33.6% over 12 months. Value as a factor has gained 7.5% this year and returned 18.8% over 12 months. The Northstar philosophy is to own quality stocks at a reasonable price, the process folds quality and valuation into a compelling case of long-term outperformance. We will struggle in a raging momentum environment!

That said, our benchmark is 60% MSCI World and 40% GLAG. Over the quarter, we outperformed this passive comparison by almost 1%, but we acknowledge that over 12 months, we are lagging the benchmark, simply due to the equity component. Our fixed income team delivered attribution of 3.6% over the past year – good selection accounted for 0.4% of this, the rest came from being underweight fixed income (average weighting of 18.7% in the fund against the benchmark of 40%). For the quarter, bond exposure had been cut to 14% and attribution was 2.2% of which 0.5% came from selection. A 9.4% exposure to gold over the year also helped performance.

We have become increasingly defensively positioned in the fund. This is not a gut feel approach, but instead rather mechanically derived. We use our buy list's discount to intrinsic value as a driver of equity exposure, when the buy list operates at a large discount (we increase equity exposure as our stocks are cheap), conversely, when the discount narrows, it implies that stocks are expensive, and we reduce risk asset exposure. The discount narrowed to the lower end of its historical range late last year and particularly in 2024, on this basis, equity exposure has been reduced.

Whilst our process is bottom-up and focused on that level, we do think that various macro indicators are worth noting. These, coincidentally corroborate our defensive positioning and include: Heightened geopolitical uncertainty both in the Middle East and in various countries facing national elections in 2024 – including the USA; High levels of confidence from market participants that a recession is a low probability outcome in the USA, despite such consensus being a contra cyclical indicator and the yield curve remaining inverted and finally; sticky inflation where base effects and energy prices are acting against softer readings.

We believe that the fund is extremely well positioned considering the present investment environment, its risk asset exposure is undervalued relative to the broader index and should outperform over time and its defensive positioning allows the management team to capitalize on any market correction, should this take place.
